YOU CAN'T REMOVE, MOVE OR HIDE THE ORIGINAL TCEXAM LOGO, COPYRIGHTS STATEMENTS AND LINKS TO [TECNICK.COM](#) AND [TCEXAM](#) WEBSITES FROM THIS SOFTWARE. TCEXAM IS SUBJECT TO THE [GNU-AGPL v.3 LICENSE](#).

CONTACT info@tecnick.com FOR COMMERCIAL USAGE.

PLEASE SUPPORT TCEXAM [MAKING A DONATION](#).

This is the administration area of [TCEXAM](#), is a platform and language independent user-friendly software to create, manage and perform online tests.

From the menu you can access the different sections of the system:

- **users**

This sections contains the forms for [insert and manage](#) users, [to select them](#) and to show the list of the ones currently [online](#).

Only the registered users granted a username and a password are entitled to access the public area of the system and perform the tests.

It is possible to specify different access levels for both the users and the different components and parts of the system (pages, forms, sections).

TCEXAM also uses another security system to prevent unauthorized access based on checking the IP addresses.

- **modules**

This section contains the forms to insert and modify test [modules](#), [topics](#), the related [questions](#) and [answers](#).

You can select an unlimited number of topics that can be used together for a specific test, and for each topic you can define an unlimited number of questions and possible answers. Depending on the settings of the Random question and Random answer tick boxes, the system can randomly select questions and answers among the available ones.

TCEXAM supports both multiple-answer questions and free-answer questions. The latter will be evaluated through a specific evaluation form, while the former will be automatically evaluated.

All the descriptions of tests, topics, questions and answers support a particular proprietary code (tccode) that, by using a specific form, allows the use of images and text formatting.

- **test**

This section includes a form to insert, generate and modify the different [tests](#), a form to [evaluate](#) the free answers and forms to show or generate PDF versions of the [results](#), a detailed view of the [users' tests](#) and the [statistics](#) of questions and answers used.

TCEXAM can be instructed to select, on a random basis, the various questions and related available answers, so that all tests for the different users will be different from each other.

It is also possible to generate an arbitrary number of tests in PDF format so that they can be printed and used for a conventional exam.

Select "users - users" menu item to edit users

The screenshot shows the TCExam application interface. At the top, there is a blue header with the TCExam logo on the left and the date/time '2010-12-02 08:01:09' on the right. Below the header is a navigation bar with links: index, users, modules, tests, backup, public, help, info, and logout. The 'users' link is highlighted. On the left side, there is a sidebar menu with options: users, groups, select, online, import, and results. The 'users' option is selected. The main content area shows a form for adding a new user. It includes a 'group' dropdown menu with 'students' selected, and a 'name' text input field with 'students' entered.

Fill the form with a new user data (username = johndoe, password = 12345678), set the level to 1, select the "students" group and click the add button.

The screenshot shows the TCExam application interface with the 'User Management' form. At the top, there is a blue header with the TCExam logo on the left and the date/time '2010-12-02 08:04:35' on the right. Below the header is a navigation bar with links: index, users, modules, tests, backup, public, help, info, and logout. The 'users' link is highlighted. The main content area shows the 'User Management' form. At the top of the form, there is a 'user' dropdown menu with '1. - admin' selected. Below this, there are several input fields for user data: username (johndoe), email (johndoe@example.com), password (masked with dots), registration date (2001-01-01 01:01:01), IP (127.0.0.0), level (1), registration number (AB1234), name (John), surname (Doe), date of birth (1981-02-03), place of birth (New York), and social security number (CD0987654321). Below these fields is a 'groups' dropdown menu with '* default' and '* students' selected. At the bottom of the form, there are three buttons: 'update', 'add', and 'clear'. Below the form, there is a blue box with the following text: 'In this form you can manage the different users allowed to access the system. For each user you can choose a name, a password and an access level. Level 0 indicates an anonymous user (not registered), level 1 a basic user (e.g.: a student), level 10 an administrator with full access rights'.

The screenshot shows the footer of the TCExam application. It includes a blue bar with the text 'user: admin' and a 'logout' button. Below this, there is a row of language codes: AR, BG, BR, CN, DE, EL, EN, ES, FR, HI, HE, HU, ID, IT, JP, MR, MS, NL, PL, RO, RU, TR, VN. Below the language codes, there is a row of version and copyright information: 'TCExam ver. 11.1.009 - Copyright © 2004-2010 Nicola Asuni - Tecnick.com S.r.l.'. At the bottom, there is a row of standards: W3C, XHTML 1.0, W3C, CSS 2.0, W3C, WAI-AAA.

You should see the newly added user on the user selector. Be sure that the "students" group is selected (gray background with an asterisk).

In this form you can insert, modify or delete the tests. In order to insert a test you must have previously defined at least one topic with a number of questions and answers. Only users with sufficient rights and a valid IP address can perform the tests. The field IP may contain also a list of the different IP addresses entitled to perform the test, separated by commas. An IP address can also contain wildcards (* = any number). The test will be active just during the specified time frame and, once started, it will have to be completed within the specified maximum time. Tests can contain several topics with different type of questions that will be randomly extracted. You can also specify a basic score for each point of difficulty level of questions. You cannot modify a test that has already performed. When a test is deleted all of its logs (test data) are also deleted. The [generate] button permits you to generate an arbitrary number of unique tests in PDF format that can be printed and performed without a computer. The letters and numbers inside the squared parenthesis on topics are quick statistics for questions: [(number of questions)(question type S,M,T,O) (difficulty):(min answers)-(max answers)].

correct: 1 / 1 (100%)
comment: Comment example.

1. **[1.000] (IP:281472812449793 | 08:54:27 | 08:54:49 | 00:22 | 20.855)**
What is the capital of Swaziland?

1. ☒ ☐ Mbabane
explanation:
Mbabane (Swati: Émbábáne), with an estimated population of 95,000 (2007), is the capital and largest city of Swaziland. It is located on the Mbabane River and its tributary the Polinjane River in the Mdimba Mountains. It is located in the district of Hhohho, of which it is also the capital.

2. ☐ Siteki
3. ☐ Manzini
